Adding controlserver to local network AG501 Controlserver Carstens Page 1 of 2

Adding controlserver to local network

A. Purpose

Adding the controlserver to a local network

B. Materials needed

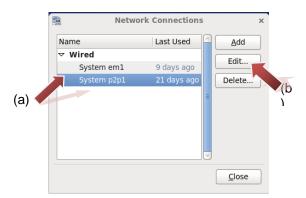

- 1. Controlserver
- 2. LAN-cable

C. Step-by-step tutorial

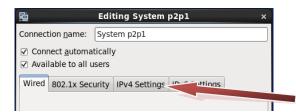

- 1. Connect the controlserver to your local network via a LAN-cable
- 2. Right-click on the LAN-icon in the top right corner

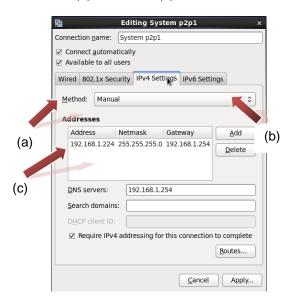

- 1. In the drop-down menu select Edit connections
- 2. In the next window, select (a) System p2p1 and click on (b) Edit

Select the IPv4 Settings tab in the following window

3. Set (a) method to (b) manual and add a valid IP-address in (c) the field below

- 4. Click Apply at the bottom and confirm with the root password
- 5. Finally, disconnect and reconnect System p2p1 via the network icon or reboot the controlserver
